

remissie.

reduce emission start today!

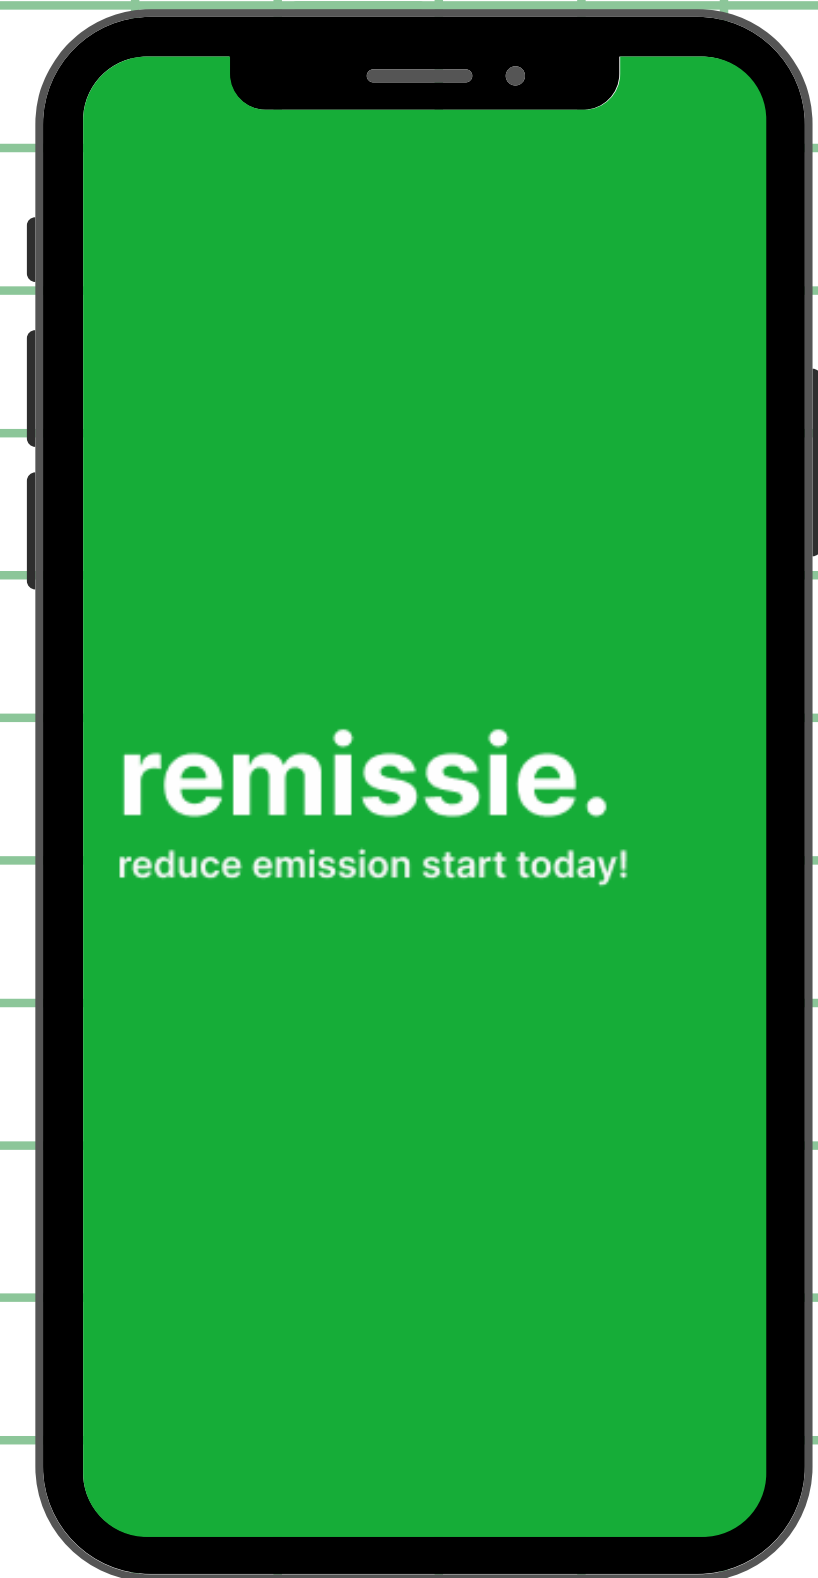

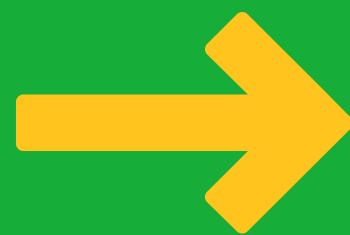

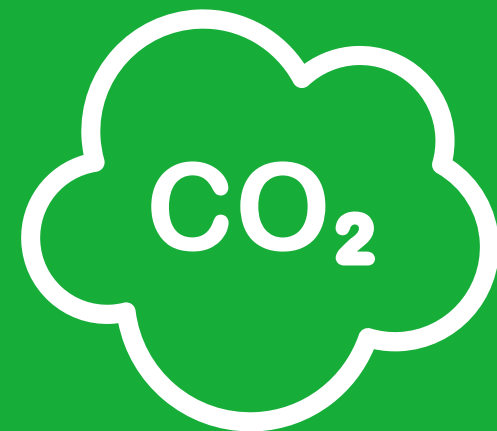

by AyoPulih

Introduction to remissie.

Remissie is a social application that entices everyone to reduce emissions together to have better air for a better world!

How?

Why remissie?

We have two objectives to solve through **remissie**:

1. Persuade users to reduce emissions
2. Make sure there is a retention of users who using our app

Also each objective we break it down into user problem statements so we want to make sure that the app that we use is solving the users' problem

I want to contribute to reducing emissions but it feels kind of hard for me to start.

I find it hard to know what kind of activities can reduce emissions.

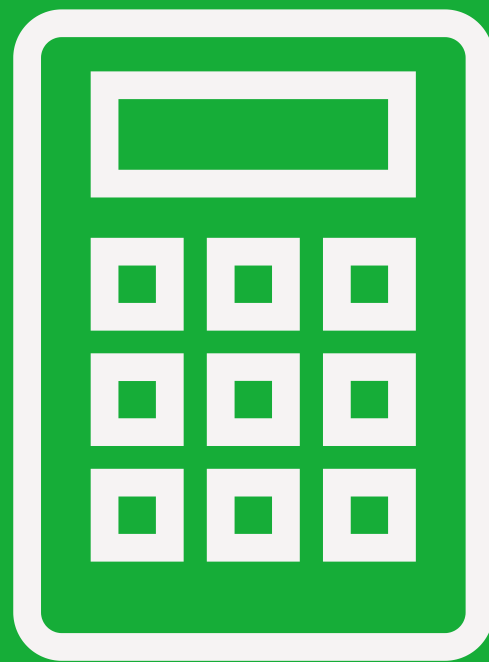

I find it hard to know what kind of activities can reduce emissions.

I don't know how important reducing emissions is.

I need more motivation to do emissionless activities.

I want to contribute to reducing emissions and not have time to do bigger things (planting for example).

What makes remissie (is) remissi (reduce emission)?

Calculate emissions from
users activity

Record all emissions from
users day by day

Getting points from every
users activity

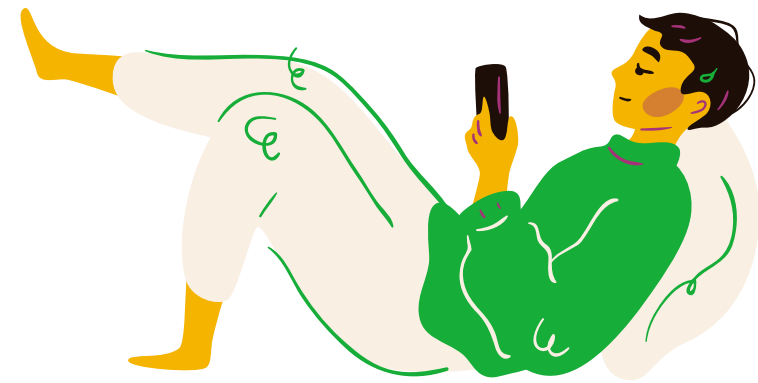

Who are our target users?

Our ultimate goals is we can **gather everyone to use our apps**

But, **early approach** to reach our ultimate goals is by **set the boundaries to office employees**

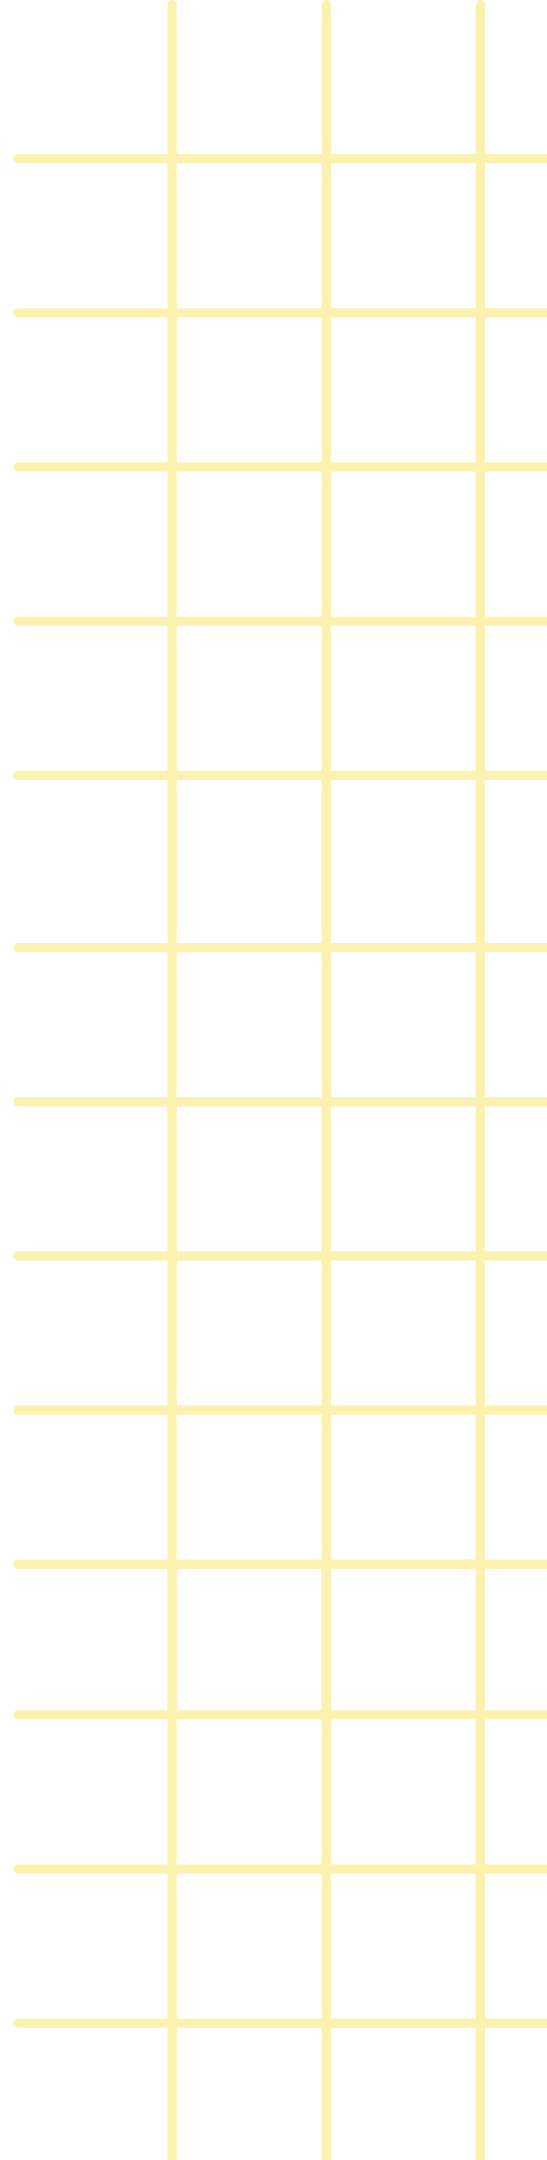

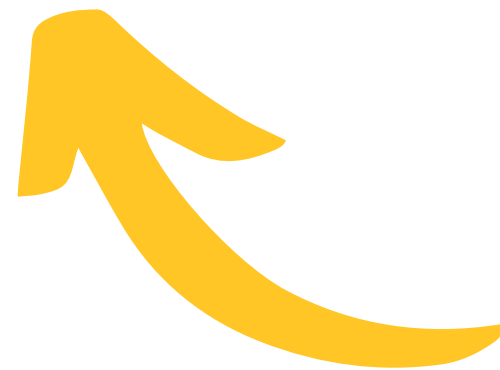

How can we keep sustain?

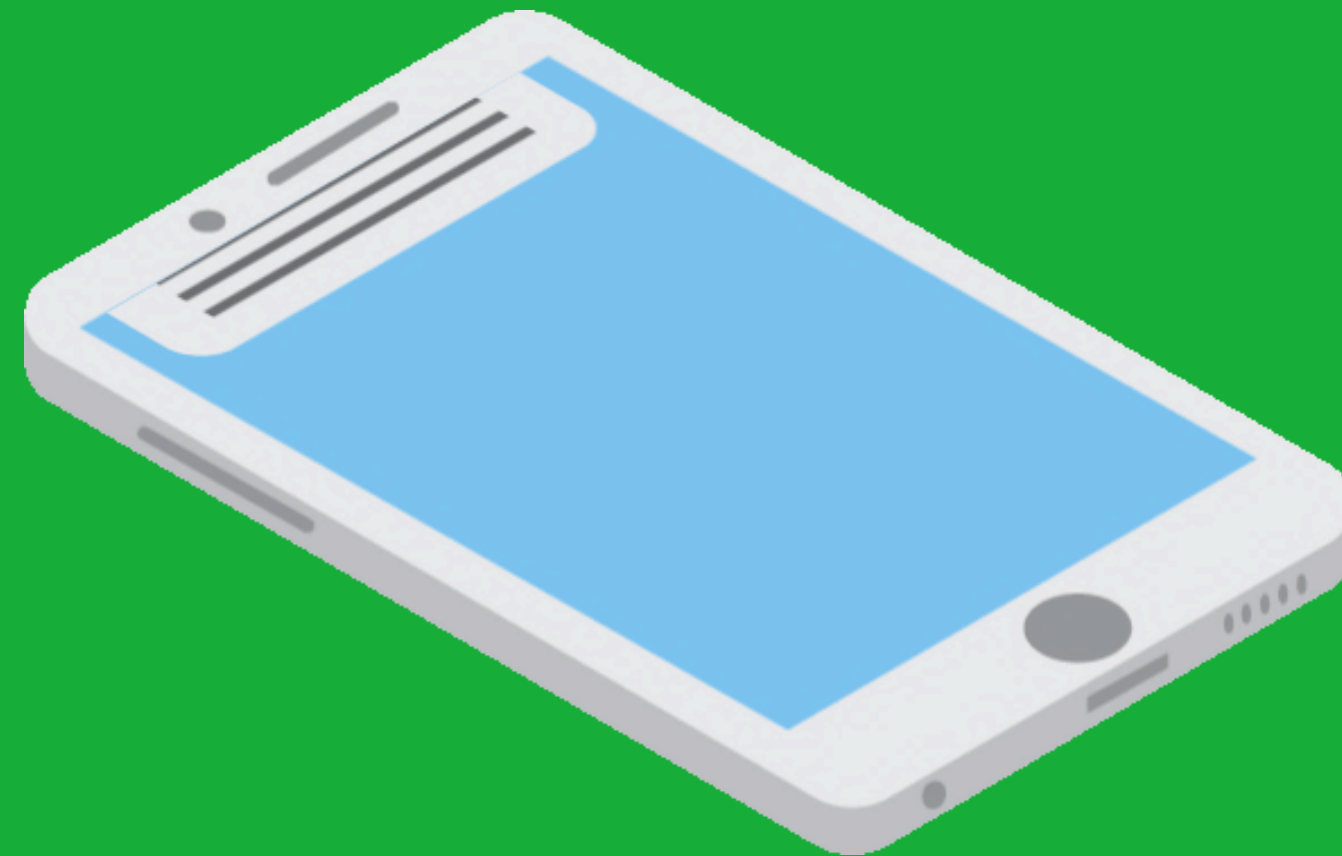

Company Partner
